#### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 20 July 2005 has been entered.

## Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 – 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tran (U.S. Patent 6,359,987) in view of Davis (U.S. Patent 4,410,890) and in further view of Tan (U.S. Patent 6,449,371).

## Regarding Claims 1 and 5, Tan discloses:

An audio output control apparatus in a mobile terminal having a player for reproducing audio data into an audio signal (Fig. 1, computers can be moved from location to location and thus are mobile), comprising:

an ear jack (Fig. 2 element 66).

Tan does not explicitly disclose that the ear jack is for transferring the audio signal output from the player to one of an earphone and an external speaker.

Tan does disclose impedance detection circuitry coupled to detect whether the attached speakers are passively driven or actively driven. If they are passively driven, the amplification is increased and if they are powered, they amplification is decreased (see Fig. 4 and its description). Tan further discloses non-amplified speakers and amplified speakers (col. 7). Tan does not disclose earphones, however, Examiner takes official notice that passively driven earphones are notoriously well known in the art. It would have been obvious to one of ordinary skill in the art at the time of the invention to attach passively driven earphones to the computer system to enjoy sound without disturbing others.

The attachment of the actively driven speakers and passive earphones to the system of Tan further discloses:

an ear jack (fig. 2 element 66) for transferring the audio signal output from the player to one of an earphone (the passively driven earphones) and an external speaker (the actively driven speakers; col. 7), connected thereto, and generating one of a first and second voltage indicating whether a connected audio output device is the earphone

Application/Control Number: 09/851,451

Art Unit: 2615

or the external speaker, respectively (Fig. 4 element 156, speakers being amplified, headphones being non amplified; the amplified speakers generating one voltage, the non amplified headphones generating another); and

a controller (i.e. the impedance detection circuitry; Fig. 4) for determining the audio output device connected to the ear jack depending on the first and second voltage (the impedance is determined based upon the measured voltage; Fig. 4) and controlling an audio gain of the player according to the determined result (i.e. the gain is lowered for the amplified speakers and increased for the passively driven headphones; Fig. 4).

Furthermore, Tan does not explicitly disclose that the computer player is an MP3 player.

Tan discloses a computer that is configured to reproduce an MP3 audio signal.

It would have been obvious to one of ordinary skill in the art to modify Tran's computer to playback MP3 audio files as taught by Tan. One would have been motivated to do so to enable Tan's computer to pay commonly available music files. The MP3 format is greatly compressed and thereby results in smaller files allowing music to be stored on the Tan system in much less space.

Regarding **Claim 2**, in addition to the elements stated above regarding claim 1, the combination further discloses:

wherein the ear jack has at least two nodes for sensing connection to either the earphone or the external speaker (col. 8 lines 7 - 9).

Regarding Claims 3 and 6, in addition to the elements stated above regarding claims 2 and 5, the combination further discloses:

wherein the controller increases the audio gain when the external speaker is connected to the ear jack, and the controller decreases the audio gain when the earphone is connected to the ear jack (i.e. the gain is lowered for the amplified speakers and increased for the passively driven headphones; Fig. 4 and col. 7).

Regarding **Claim 4**, in addition to the elements stated above regarding claim 2, the combination further discloses:

wherein the earphone includes a first ear jack connector connected to the ear jack for generating the first voltage, and the external speaker includes a second ear jack connector connected to the ear jack for generating the second voltage (the earphone and amplified speakers must have connectors to connect to the Tan system, the amplified speakers generating one voltage, the non amplified headphones generating another).

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew C. Flanders whose telephone number is (571) 272-7516. The examiner can normally be reached on M-F 8:30 - 5:00.

Application/Control Number: 09/851,451

Art Unit: 2615
